Research Background

In view of the outbreak of Novel Coronavirus (also known as “Wuhan Pneumonia”) in late January 2020, the Hong Kong Public Opinion Program (HKPOP) under the Hong Kong Public Opinion Research Institute (HKPORI) kick-started the “Community Democracy Project: Community Health Module” or “Community Health Project” using a PopPanel survey design to study the public’s views on the epidemic and the Government’s relevant policies using small communities such as housing estates as the unit of analysis. The study covers people’s views on their perceived chance of contracting pneumonia, appraisal on the government’s handling of the disease, impacts of border closure, calls for strike by frontline medical staff, community outbreak, home-working conditions and their general use of face masks. The special feature of the Community Health Project is the lowering of respondents’ age bracket to 12 years old, in order to obtain more comprehensive samples.

As the epidemic developed, on February 2, 2020, HKPOP engaged Professor P.C. Lai from the Department of Geography at The University of Hong Kong and Professor Paulina Wong from the Science Unit at Lingnan University to build the “**Community Health Information System**” (CHIS) to present survey data and relevant information using a geographic information systems (GIS) down to different community levels. Survey data, like peoples’ possession of protective masks, their need for anti-epidemic commodities and so on, is processed using a 15-day rolling method to begin with, and presented alongside with other health and geographical information. HKPOP started to collect and collate CHIS survey data via its online survey platforms on February 2, 2020 and then displayed them on a GIS map accessible via its website at <http://www.pori.hk/> starting from February 18. While this map is updated almost every working day, HKPOP still compiles written CHIS Reports every now and then as snapshots of CHIS findings. As of this date, three CHIS Reports including this one have been compiled.

CHIS Reports No. 1 and 2 were released on March 3 and 6, and this CHIS Report No. 3 is the third release. It is worth noting that the contents of these reports only cover the results of certain CHIS survey questions within certain survey periods, while the dynamic data displayed in the CHIS map is updated very frequently. The purpose of these reports is mainly for archiving snapshots taken at specific time. HKPOP will continue to compile CHIS reports on an irregular basis.

Data Coverage Periods

While this CHIS map is updated almost every working day, three CHIS Reports including this one have been compiled as of this date. CHIS Report No. 1 took three snapshots of CHIS rolling data (spanning 15 continuous calendar days) and the data collection periods were February 2 to 17, February 5 to 20 and February 16 to March 2. In CHIS Report No. 2, one more set of rolling data covering February 19 to March 5 was added. This CHIS Report No. 3 covers the rolling data from February 26 to March 12, including two questions which was stopped on March 10. For easy reference, Table 1 gives the data period of each question covered by CHIS up to this date, while Table 2 documents the upload time of our CHIS map up to this date, along with questions covered, their sample size in each update, as well as which CHIS print reports have carried the findings.

Survey method	Online Survey
Target population	HKPOP Panel samples, namely Hong Kong People Representative Panel (Probability-based Panel) and Hong Kong People Volunteer Panel (Non-probability-based Panel)
Data period	February 26, 1500 to March 12, 1500 (past 15 days)
Total sample size	15,685

Explanation of Data Analysis

The CHIS data is processed and presented in the following manner:

1. The samples from “Hong Kong People Representative Panel” and “Hong Kong People Volunteer Panel” who responded to the questions of “mask/ethyl alcohol/hand sanitizer reserve” and “demand for anti-epidemic commodities” are first screened for the past 15 days;
2. Unlike other opinion questions, the data of the CHIS comes from all samples of the Hong Kong People Representative Panel and Hong Kong People Volunteer Panel within a certain survey period, and not adjusted by any weighting.
3. The question on “mask/ethyl alcohol/hand sanitizer reserve” is processed as follows:
 - a. Calculate and pair up the mean values of “reserve” for individual constituency areas, then divide all values into 6 groups according to the natural breaks classification method of geographic information systems (GIS) designed for easy appreciation by the general public, with specific separation values and representations by different colors in the map, to reflect the relative scarcity and abundance of mask reserve in that area. The colors used for the six intervals are as follows:
 - First interval: red
 - Second interval: orange
 - Third interval: yellow
 - Fourth interval: green
 - Fifth interval: turquoise
 - Sixth interval: blue
 - b. If the valid sample from a certain constituency area is less than 30, the information is treated as “missing” and no colour pairing will be made or displayed.
4. The question on “demand for anti-epidemic commodities” is processed as follows:
 - a. In each constituency area, calculate the number of people who need each “anti-epidemic commodity”, namely:
 - i. Face mask
 - ii. Hand sanitizer
 - iii. Ethyl alcohol
 - iv. Bleach
 - v. Disinfectant spray
 - vi. Disinfectant wipes
 - vii. Antiseptic disinfectant
 - viii. Hand wash
 - ix. No need at all
 - b. Calculate the sample size of each constituency area, divide “number of people who need each anti-epidemic commodity” by the sample size of that area to obtain a percentage, then use the same classification method and color scheme explained before to show people’s relative demand on various commodities in that area.
 - c. If the valid sample from a certain constituency area is less than 30, the information is treated as “missing” and no colour pairing will be made or displayed.
5. For detailed interval values, please refer to Appendix 1.

Survey Results

Part One Mask Reserve

The CHIS has been tracking people’s **mask reserve** ever since it was launched. As of 3pm of March 12, overall speaking, Hong Kong people’s average mask reserve stands at 57.6 days (Table 4). Among 18 districts, Kwun Tong District has the smallest reserve (55.2 days) and Wan Chai District has the biggest reserve (62.3 days; Table 5).

In terms of 452 constituency areas, excluding those with valid samples of less than 30, the bottom five constituencies with the smallest amount of mask reserves, in a relative sense, are Sai Kung Central in Sai Kung (45.0 days), Lower Ngau Tau Kok Estate in Kwun Tong (46.7 days), San Hui in Tuen Mun (47.2 days), Chui Ka in Sha Tin (47.6 days) and Tsui Ping in Kwun Tong (47.8 days), while the top five constituencies with the biggest amount of mask reserves, in a relative sense, are Pokfulam in Southern District (72.9 days), Tin Hau in Wan Chai (71.7 days), Quarry Bay in Eastern District (69.9 days), Kam Ying in Sha Tin (67.9 days) and Hok Yuen Laguna Verde in Kowloon City (67.6 days). Please refer to Appendix 2 for details.

Closely related to mask reserve, the CHIS has also been tracking people's mask usage. As of 3pm of March 12, overall speaking, Hong Kong people's average mask usage stands at 0.97 mask per day (Table 6). Among 18 districts, Wan Chai District has the lowest usage rate (0.89 per day) and Kwai Tsing District has the highest usage rate (1.02 per day; Table 7).

In terms of 452 constituency areas, excluding those with valid samples of less than 30, the bottom five constituencies with the lowest mask usage rate, in a relative sense, are Happy Valley in Wan Chai (0.70 per day), Pak Sha Wan in Sai Kung (0.72 per day), Pokfulam in Southern District (0.74 per day), Prince in Kowloon City (0.77 per day) and Tai Po Kau in Tai Po (0.77 per day), while the top five constituencies with the higher mask usage rate, in a relative sense, are Cheung Hong in Kwai Tsing (1.33 per day), Ching Fat in Kwai Tsing (1.28 per day), Fu Heng in Tai Po (1.27 per day), Shan King in Tuen Mun (1.26 per day) and Kin Sang in Tuen Mun (1.25 per day). Please refer to Appendix 3 for details.

If we link up the number of days of people’s mask reserve with their mask usage, we can then compute the “number of masks available for use”. As of 3pm of March 12, Hong Kong people on average have 56.9 masks available for use in general (Table 8), with Islands District having the least (51.0 pieces) and Tsuen Wan District having the most (59.4 pieces) among 18 districts (Table 9).

In terms of 452 constituency areas, excluding those with valid samples of less than 30, the bottom five constituencies with the least masks available for use, in a relative sense, are Prince in Kowloon City (36.8 pieces), Charming in Yau Tsim Mong (40.7 pieces), Yan Lam in Eastern District (42.5 pieces), Kadoorie in Kowloon City (42.7 pieces) and A Kung Ngam in Eastern District (44.0 pieces), while the top five constituencies with the most masks available for use, in a relative sense, are Kai Yip in Kwun Tong (93.4 pieces), Fu Heng in Tai Po (81.3 pieces), Cheung Hong in Kwai Tsing (81.1 pieces), Shan King in Tuen Mun (81.0 pieces) and Kin Sang in Tuen Mun (80.4 pieces). Part Two Ethyl Alcohol Reserve

From March 4, 3pm, the survey added the questions on reserve of ethyl alcohol and hand sanitizers. However, since the demand for various anti-epidemic commodities has gradually resumed to normal, HKPOP has stopped the data collection for these questions since 3pm of March 10.

As of the above cutoff time, overall speaking, Hong Kong people's average reserve of **ethyl alcohol** stood at 38.5 days (Table 10). Among 18 districts, Kwai Tsing District had the smallest reserve (34.4 days) and Wan Chai District had the biggest reserve (45.3 days; Table 11).

In terms of 452 constituency areas, excluding those with valid samples of less than 30, the bottom five constituencies with the smallest reserves of ethyl alcohol, in a relative sense, were Yee Fu in Tai Po (27.9 days), San Po Kong in Wong Tai Sin (28.4 days), Provident in Eastern District (28.9 days), Heng Fa Chuen in Eastern District (30.4 days) and Fairview Park in Yuen Long (30.9 days), while the top five constituencies with the biggest reserves were, in a relative sense, South Horizons East in Southern District (54.3 days), Sui Wo in Sha Tin (53.9 days), Do Shin in Sai Kung (53.6 days), Yuen Lung in Yuen Long (51.5 days) and Bik Woo in Sha Tin (48.8 days). Please refer to Appendix 5 for details.

Part Three Hand Sanitizer Reserve

For **hand sanitizer**, as of 3pm of March 12 when the question was stopped, Hong Kong people's overall average reserve of hand sanitizer stood at 52.5 days (Table 12). Among 18 districts, Kwun Tong District had the smallest reserve (49.7 days) and Sai Kung District had the biggest reserve (55.4 days; Table 13).

In terms of 452 constituency areas, excluding those with valid samples of less than 30, the bottom five constituencies with the smallest reserves of hand sanitizers, in a relative sense, were Cheung Sha Wan in Sham Shui Po (38.9 days), Ping Shan South in Yuen Long (39.3 days), Chung On in Sha Tin (40.2 days), Charming in Yau Tsim Mong (41.3 days) and Lai Ching in Kwun Tong (42.2 days), while the top five constituencies with the biggest reserves, in a relative sense, were Sui Wo in Sha Tin (69.7 days), Kam Ping in Eastern District (67.6 days), Nam On in Sai Kung (65.7 days), Sai Kung North in Tai Po (64.9 days) and Fo Tan in Sha Tin (64.8 days). Please refer to Appendix 6 for details.
